

WORLD LIVING WATER SYSTEMS LTD.

The Vortex Water Revitalizer and the Environment

Using the Vortex Water Revitalizer reduces your Carbon Footprint.

- Increased dissolved oxygen in the water creates a more hospitable environment for aerobic (good) bacteria, which aid in the efficient breakdown of sewage & wastewater. The wastewater leaving your home after installing the Vortex Water Revitalizer, will be less detrimental to our rivers, lakes and oceans.
- Revitalized Water stays Revitalized and positively affects surrounding wastewater in the sewage system.
- Revitalized Water's antibacterial properties allow you to use less harmful chemical cleaners throughout your home.
- Naturally treating your tap water brings an end to the need for plastic water bottles.

If every home and business around the world used the Vortex Water Revitalizer, we would see a major transformation of our global water crisis.
