

WORLD LIVING WATER SYSTEMS LTD.

The Vortex Water Revitalizer

Why Revitalize Your Water?

Today's Water Situation

The water pumped through our cities and towns is over processed and full of harmful chemicals. Our water is put through many unnatural processes before it reaches our taps. Throughout our municipal water treatment systems, water passes through miles of straight and narrow pipelines with 90-degree turns; it is frequently exposed to unnatural, high-pressure turbine pumps.

These unnatural ways of processing water cause it to lose its natural structure, its vitality and many of its natural properties, including the ability for water to self-clean. It becomes defenseless against bacteria and viruses. As a result of bacteria build up, chlorine is added to water throughout the distribution systems in our cities and towns. This kills both the good and bad bacteria.

Apart from this unnatural treatment of water, there are a number of other water issues we face today:

- Hard water
- Toxins
- Odors
- Pesticide run-off
- High mineral, scale & rust content

The Vortex Water Revitalizer was designed to reverse this unnatural treatment of water, by treating water naturally and simulating its natural flow dynamic. As a result, your water's natural properties are restored and it is brought back to its natural health, structure, vitality.

“Water is itself a living entity and should be treated as such.”

- Callum Coats

Comes with a 60-Day Money Back Guarantee and a 10-Year Limited Warranty.
